

DYNAMO | Customer & Vendor Netting Solutions for Professionals

The perfect solution for
Microsoft Dynamics 365 Business Central

Company consolidation; compressed item, payment, and liquidity management; process simplification. New challenges need optimized solutions.

At a glance:

- **Completely integrated enhancements for standard functions**
- **Intuitive use facilitates seamless introduction**
- **Compatible with the DYNAMO | PAY Editions**

DYNAMO | CVN

(Customer & Vendor Netting)

Under the product name **DYNAMO**, AKQUINET develops functional extensions for Microsoft Business Central (BC).

Thanks to our many years of experience and constant exchange with Dynamics BC partners in Germany and throughout Europe, we can offer high-quality ISV solutions that can be used across all industries and are oriented towards the user's requirements.

OUR **DYNAMO** products perfectly complement YOUR Microsoft Dynamics ERP solution.

Reliable and transparent.

Are your customers also suppliers? Are your payment partners organized in associations and are related business transactions to be cleared jointly?

With the application **DYNAMO | CVN (Customer & vendor netting)**, you will no longer have difficulties settling receipts and payments from different customers and / or suppliers even if different currencies are involved.

In the settlement you can see all open items of the clearing group members you want – they are prepared according to your own filter criteria.

You decide whether to post in the client currency or in the clearing group currency. Simply select the transactions you want to include in the settlement and post it with a mouse click or by pressing a button.

Use the posting preview function to have full control over your transactions. If needed, you can repost items within the settlement group just as easily.

Using the integrated settlement group statistics, you can evaluate every group individually by client currency or, if you prefer, in the settlement group currency.

DYNAMO	COSTOMER & VENDOR NETTING
• Create settlement groups • Settle vendors • Settle customers	• Use settlement group currencies • Integrated posting preview • Extensive settlement group statistics

Use the module **DYNAMO | CVN (Customer & Vendor netting)** independently of **DYNAMO | PAY (Payment)** or completely integrated.

Available for Microsoft Dynamics 365 Business central on premises and SaaS and NAV 2016 and higher.

The scope of our products is continuously supplemented and further developed by additional ideas and requirements from our users and partners. The close cooperation with Microsoft always keeps our solutions on the pulse of time.

All **DYNAMO** products have been specially designed for Microsoft Dynamics technologies and are **certified** for the respective version by the manufacturer.

Based on the standards of Dynamics 365 BC, the **DYNAMO** team of AKQUINET produces integrated, certified solutions for the areas of finance, payment transactions and card terminal connections.

Regardless of the industry, our products can be integrated into your environment individually or in combination without any major integration effort.

Thanks to our partners, who have supported us for many years, our modules have been licensed over 11,000 times in Germany and worldwide.

Find out more about integrating our products into your Microsoft Dynamics 365 BC solutions from your partner or via our web presence.
